LehrPuls

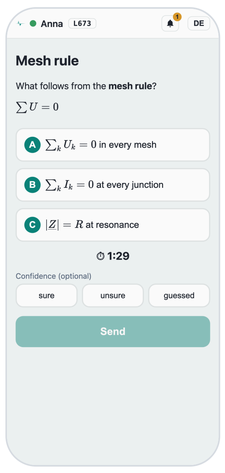

LIVE POLLING IN THE LECTURE HALL
LOCAL, NO CLOUD

Do you know if it landed?

LehrPuls makes visible what gets through in the lecture hall — for students during class, for teachers across the semester, for the university across years. Local, no cloud, no account.

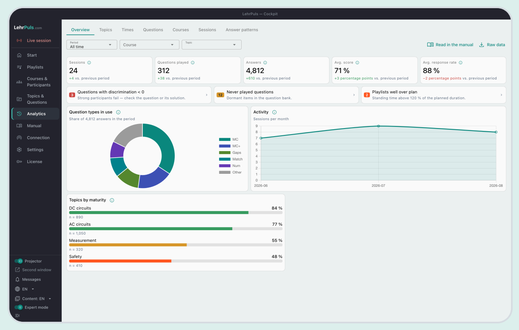

Students assess themselves. 1

Every question is feedback to the person: “This I know — this not yet.” Participants answer anonymously with their own smartphone, with no account and no grade. Peer instruction makes the difference between the first and the second answer tangible.

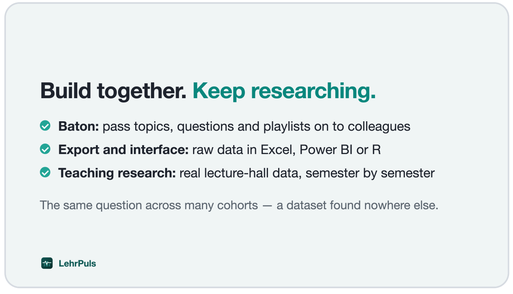

Teachers see what gets through. 2

Within twenty seconds the result is on the projector, and you decide whether to move on. The analytics show where the course gets stuck: difficulty, discrimination and response times per question. The same question next semester — and you see whether your change worked.

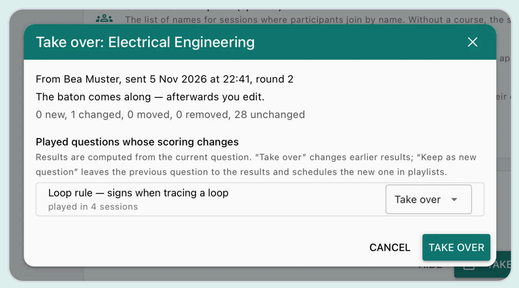

Raw data, interface, research. 3

Every answer is in the raw-data export in long format, ready for Excel, Power BI, R or Python. A read-only interface delivers metrics straight from the running cockpit. The same question across many cohorts yields a dataset found nowhere else.

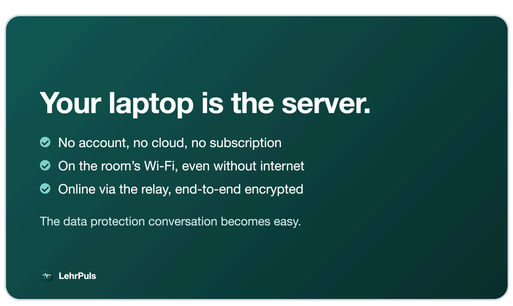

Teachers build together. 4

With the baton, teachers pass topics, questions and playlists on to colleagues. Whoever holds the baton edits; the others receive read-only copies and play the current version. The question bank becomes the common property of a degree program — no copies, with history.

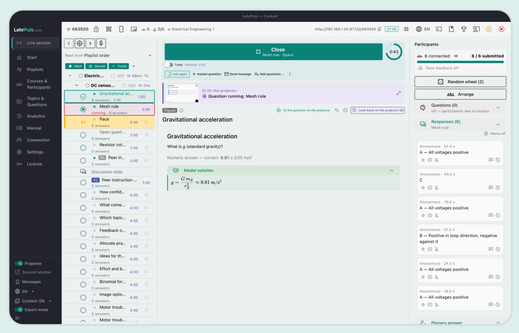

The university learns from evidence. 5

Metrics per topic, course and semester show where teaching works and where it needs help. A minimum group size for distributions protects individuals; deletion deadlines remove names at the push of a button. No cloud, no accounts: the data stays in-house — privacy becomes an enabler.

Much more than asking questions. 6

Overlay on PowerPoint, Keynote and PDF; remote control on the smartphone; question wall and files to everyone. Nineteen question types with formulas and images, groups even anonymous, multilingual and extensible at will. One app for Mac and Windows, buy once instead of renting every year.
